## 安装ASPEN12

1,断网。最简单的就是拔网线

Disable internet connection, but do not turn of networks interfaces.

2, 安装Sentinel RMS v8.5.1 Server

Install Sentinel RMS v8.5.1 Server.

这个东西在下载的东东里边: \patch\install\_Sentinel.RMS.8.5.1.Server\setup.exe

3,创建系统变量。不懂没关系,照猫画虎就行。Create the system varyable LSHOST={YOURPCNAME}

LSHOST是关键词·不要打错·"WIN10"你计算机的名字(name)·我的计算机名字是WIN10·不要抄!

4, 以管理员权限运行\patch\install\_Sentinel.RMS.8.5.1.Server\Tools\WImAdmin.exe

这个东西仍然在下载的东东里边。

下一步就是加载证

书。照猫画虎就行。

**三千多个**证书,要等好处时间。我的虚拟机里边等了超过半小时

5, **下一步就可以安装了。我就以安装**Aspen-V12-ENG.zip为例,这也是最常用的。解压到一个目录。点击SETUP.

## 缺失JAVA 8提示,先略过。可能有些功能不能用,你也可以以后再安装。

The following prerequisites are required by the products you selected. Some can be installed by clicking **Install Prerequisites**; others must be installed manually before you can proceed.

## Status Prerequisite Item

Java 8 64bit •

The Primavera link between ACCE and AICE V12 requires installation of Java 8 64 bit. Aspen installer cannot detect a supported Java 8 64bit on this machine. Refer to the <u>AspenTech Support Site</u> regarding Java 8 64bit support for AspenTech applications. You can proceed with installing Aspen Economic Evaluation and install the JDK at a later point.

## **指向**证书文件

该重启就重启吧。不过要把自动升级关掉。

还是不能用?

忘掉了最后一步。覆盖DLL文件。

C:\Program Files\Common Files\AspenTech Shared\

File version: 2018.11.1.508

可以用了。注意,每次使用都要重复步骤4·加载证书。很费时间,其实,你可以把那个证书拆开,只加载你要使用的模块。费了近三个小时!
